

REFURBISHED ENTERPRISE HARDWARE

**REFURBISHED IT EQUIPMENT,
READY WHEN YOU NEED IT.**

AI demand is driving up hardware costs and lead times, making new equipment harder to plan around.

Maintech helps IT teams access reliable refurbished enterprise hardware to fill capacity gaps, replace failed equipment, or extend existing infrastructure without a full refresh.

MAINTTECH

What This Means for You

Skip the OEM wait

Get refurbished servers, components, and full configure-to-order builds without the lead times currently affecting new equipment.

Lower the cost of hardware

Refurbished enterprise hardware comes in at a fraction of new OEM pricing. Targeted upgrades cost even less than buying full replacement systems.

Extend the life of equipment you already own

Memory, storage, and drive upgrades can boost performance and extend the production life of existing systems, freeing CapEx for other priorities.

Ship with warranty coverage from day one

All equipment includes a one-year warranty, with optional uplift and maintenance support available.

One accountable partner

Maintech provides fully configured systems directly to you and acts as your warranty agent. Deployment, installation, and maintenance support are available where needed.

Reduce hardware waste

Extending the life of working equipment keeps usable hardware out of disposal streams and supports sustainability targets.

How It Works

Specification and Quoting

Provide your required system or component specification. Maintech confirms availability, pricing, and delivery options.

Deployment Support

Where required, Maintech field teams can handle installation, commissioning, and integration on site, in country, and in the local language.

Build and Test

Configure-to-order systems are assembled and tested before shipping. Equipment arrives ready to install.

Warranty and Ongoing Support

Equipment is covered from day one, with optional warranty uplift and ongoing maintenance through Maintech's global service network.

Why This Matters Now

The supply environment for enterprise hardware has shifted, and the pressure is not easing:

OEM lead times have lengthened

New server hardware can take longer to arrive, making project timelines harder to plan and capacity harder to manage.

Existing infrastructure has more to give

Many production systems have years of useful life left with the right memory, storage, or component refresh.

Component pricing has climbed sharply

AI infrastructure demand is tightening memory and storage supply, driving sharp price increases as suppliers shift capacity toward AI.

Refresh budgets are under pressure

Get more from your CapEx budget with targeted upgrades instead of a full new build or costly infrastructure replacement.

Why Maintech?

50+ years inside enterprise IT environments, directly employed technicians across 60+ countries, and a vendor-neutral approach. Every refurbished build, component upgrade, and configure-to-order system sold through the program is backed by the same engineering standards and service accountability that have defined Maintech for over five decades.

Get the enterprise hardware your business needs without the OEM wait. **Contact Maintech to discuss your requirements with an account executive today.**
